

# Life Changes and Progress in the Middle East

Walid Ashraf

# Dataset(s)

My Research Was Focused on the World Development Indicators Dataset.

My Research Included the Following Indicators:

- Adult Literacy Rates
- Life Expectancy
- Internet availability per 100 Person
- Adjusted net national income per capita (constant 2005 US\$)

# Motivation

The Middle East have been subjected to multiple changes in the last 50 years. The changes can be caused to the multiple changes in leadership, revolutions and the discovery of multiple oil and gas fields. Aside of the causalities the effects on the personal life style, education, health and income are yet unknown to the author.

This presentation will guide the audience to the changes that occurred in this era. The information are useful to both decision makers and people who are willing to travel there for work, residency or investment.

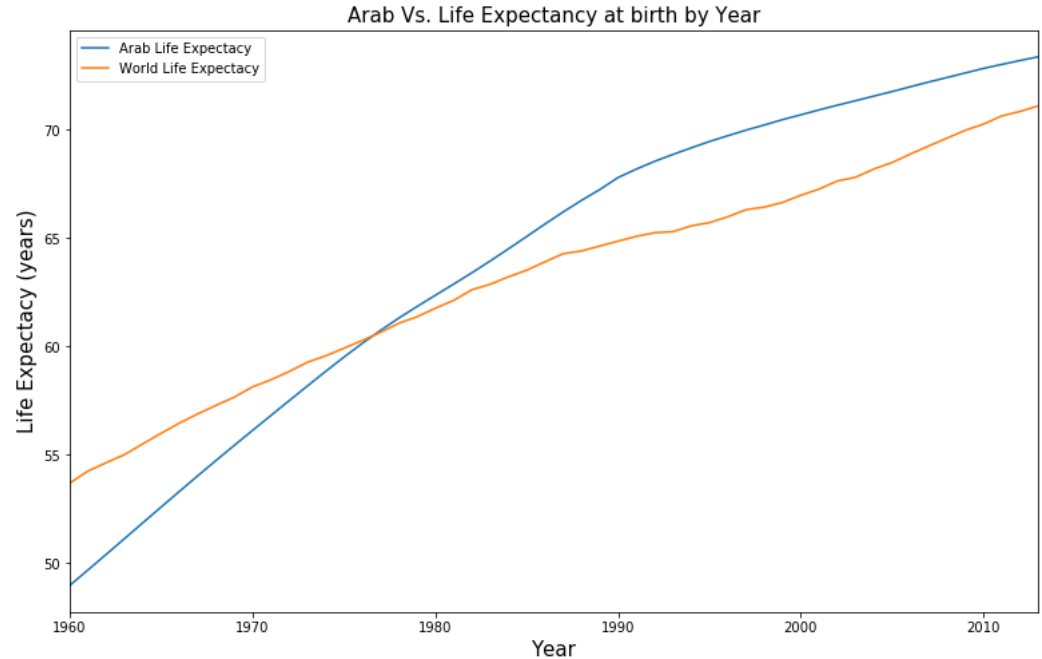

# Research Question(s)

What are the changes that occurred in the life of Middle eastern people in the last fifty year in terms of education and Health, And How good the living conditions in the arab counties?

# Life Expectancy

This graph shows that the Arab and middle eastern world shares and exceeds the life expectancy with the rest of the world.

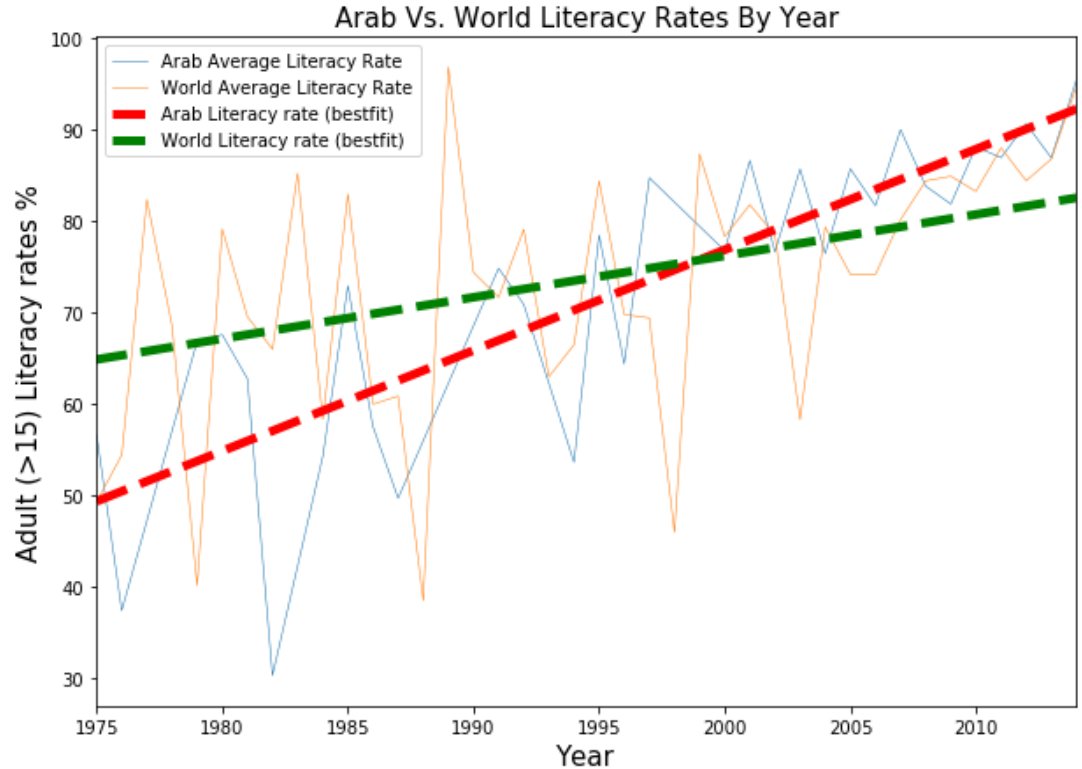

The advance is caused by improvements in the middle services.

# Literacy Rates

The graph shows both actual data and general direction increases in literacy between (1975 and 2014).

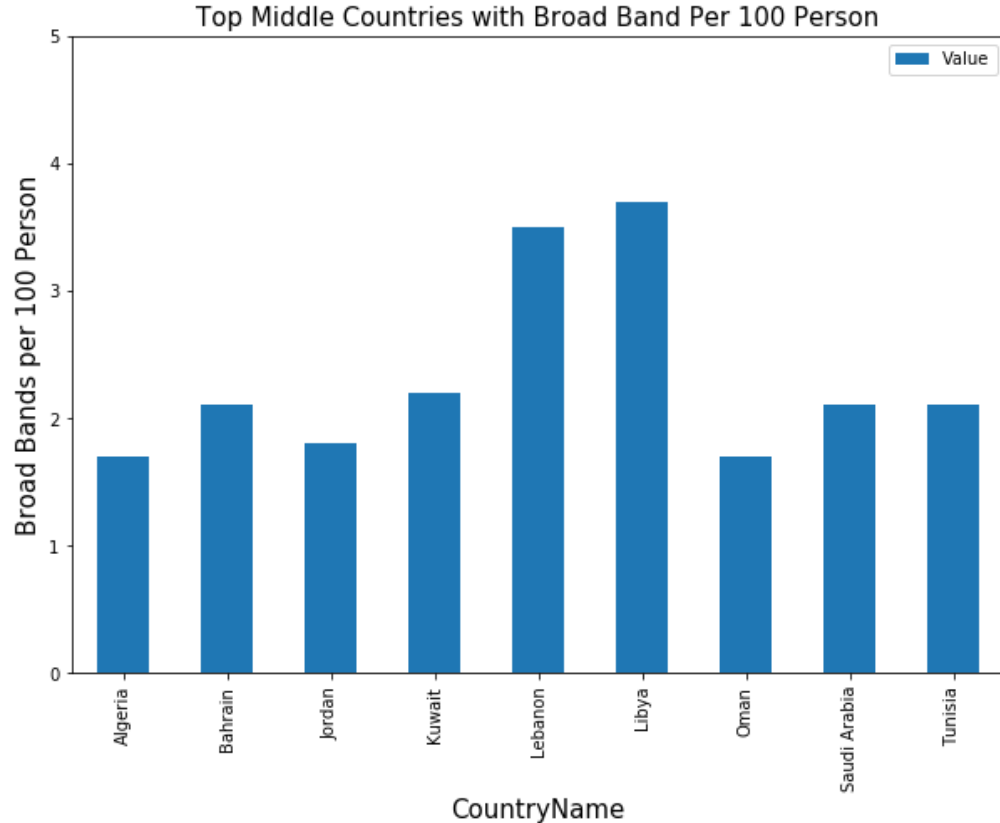

Although in 1975, the literacy was less than 50%. The Arab world have rose to meet with the rest of the world in the year 2000. while expecting to demolish by 2020.

# Broad Band Availability Per 100 Person

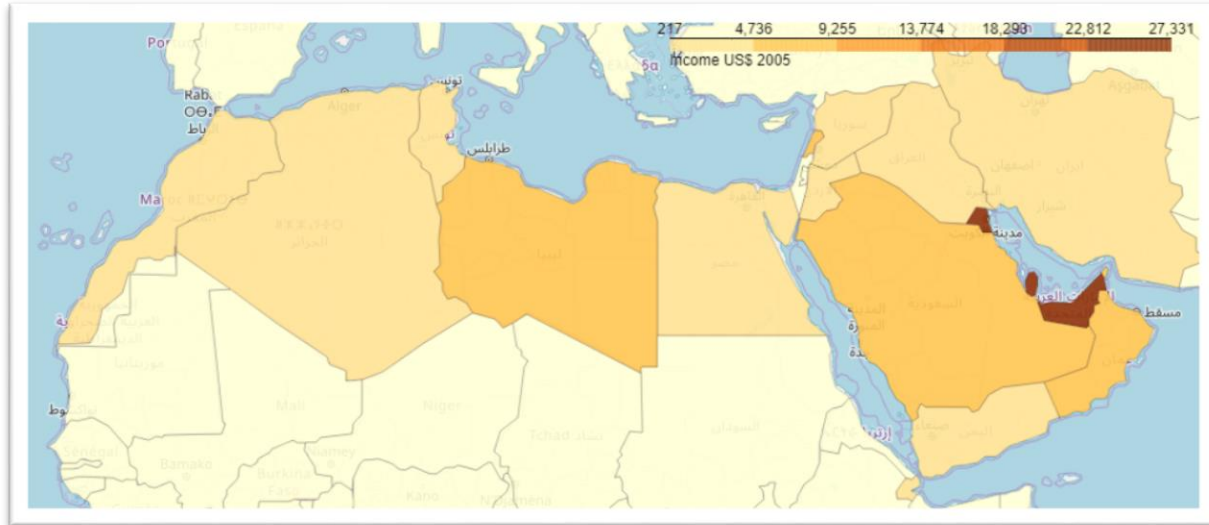

The graph shows the latest and top numbers for the broadband availability in to Middle Eastern countries.

Although these number have been updated [1], but its gives an indication of the investments done by each country in the technological sector.

# Adjusted net national income per capita (constant 2005 US\$)

This map shows that the Gulf area contains the highest income per capita followed by Saudi Arabia and Libya. These numbers indicate that if you are an employee, these are the places to be.

# Acknowledgements

The work findings are analyzed and plotted without any help.
